

# PUBLIC HEALTH MPH

The Master of Public Health (MPH) Program will place you at the intersection of leadership, policy and sustainability as you address the determinants of health in Canada and beyond. The MPH Program is a 12-month, full-time program employing case-based and team-based learning. With real public health issues as the foundation of your learning, you will be immersed in some of the most significant and complex public health crises that our country and planet have experienced. Students will learn about public health in a team-based setting where they practice decision-making skills under pressure.

With a special focus on public health issues experienced in urban and rural settings, Indigenous populations across Canada and international populations, this Program will help you foster a special skill set to better understand and assess health problems and develop appropriate solutions for various communities.

A 12-week practicum, various networking opportunities with public health practitioners, and the unique opportunity to learn from an integrated, interdisciplinary faculty will further enhance your in-class, small group and Independent learning.

*The MPH Program is accredited by the Council on Education for Public Health.*
