

SURGERY MSc

The MSc in Surgery Program is tailored to your unique needs as a surgical trainee. It provides an intensive research experience and a solid foundation for success as an academic surgeon.

The full-time, 12-month program offers you the flexibility to train in different aspects of clinical and basic science surgical research. You will train with world-renowned experts in state-of-the-art research laboratories and participate in innovative projects that will enhance the understanding and treatment of disease. You will gain a core understanding of research methodology and the foundation required for subspecialty-related research in areas of surgical care, education and patient outcomes.

CAREERS

The MSc in Surgery Program is intended to fully prepare you for future positions in academic health sciences centres for the demands of a research career in relation to the CanMeds roles of Medical Expert and Scholar.

SURGERY MSc

MSc
